rganization or biogenesis
olical system process
transposition
atory system process
ell−cell signaling
cell adhesion
ary metabolic process
opmental maturation
ular matrix organization
membrane transport
el differentiation
formation involved in morphogenesis
locomotion
cell motility
reproduction
al structure development
gnal transduction
ne system process
ll morphogenesis
meostatic process
cycle metabolic process
metabolic process
bryo development
cell proliferation
growth
unction organization
rotein maturation
drate metabolic process
pigmentation
transport
esponse to stress
cell death
keleton organization
sading
ecule metabolic process
membrane organization
e−mediated transport
otein modification process
pound metabolic process
brane organization
n complex assembly
component assembly
synthetic process
atabolic process
ecular complex assembly
no acid metabolic process
or metabolic process
ssing mutualism through parasitism
compound metabolic process
autophagy
protein targeting
ependent intracellular transport
cytoplasmic transport
A metabolic process
nosome organization
cell cycle
ning compound catabolic process
acular transport
ecursor metabolites and energy
cell division
nondrion organization
mitotic cell cycle
nosome segregation
protein folding
RNA processing
A metabolic process
translation
protein complex assembly
osome biogenesis
